

Crosscheck

Your 2-minute demo script — friendly walkthrough

Total run time ≈ 2 minutes · read it warmly, like you're showing a friend. Text in *grey italics* is what you *do* on screen; the rest is what you say.

Intro · 0:00 – 0:20

Smile, app not open yet (or on the home screen).

"Hi! Let me show you something I built called **Crosscheck**. You know how, when you're researching something, you read a bunch of articles — and they don't always agree? One says one thing, another says the opposite, and it's really easy to miss it. Crosscheck is a little research assistant that **never forgets** what it reads, and actually **catches those contradictions** for you. Here, let me show you."

1 · It remembers everything · 0:20 – 0:40

Open the app. Let the graph on the right settle.

"Everything I've fed it is right here — this little web is its memory. And here's the neat part: I closed the app and reopened it, and it all came straight back. Nothing to reload. It just **remembers** — like a colleague who actually keeps good notes."

2 · It catches the lie · 0:40 – 1:20 the moment

Point to the red  Contradictions card.

"Now watch this. I gave it three reports about a database called **FooDB**, written in different years. And Crosscheck spotted something I'd probably have skimmed right past. Back in **2021**, one report said FooDB handled **fifty thousand** requests a second. But a **2024** report said only **ten thousand**. That's a massive difference — and it flagged it for me, showing exactly **which source said what, and when**. That's the whole point: it catches your sources **disagreeing**, so you don't get fooled."

3 · It tells you what's next · 1:20 – 1:40

*Click **Suggest** under "Gaps to research."*

"It even looks at what it knows and suggests what to dig into next — like a curious teammate saying, 'hey, we should look into the licensing, or these performance numbers.' So it doesn't just remember — it helps you **keep going**."

Outro · 1:40 – 2:00

Turn back to camera, relaxed.

"And the best part? This runs **entirely on my own laptop** — no cloud, no accounts, no bill. It's free and private. So that's Crosscheck: it **remembers everything**, it **catches your sources contradicting each other**, and it **tells you what to explore next**. Thanks so much for watching!"

Quick tips while filming

- Speak slowly — 2 minutes is plenty, don't rush the FooDB moment; it's the star.
- Lead with the red Contradictions card. Skip the "Ask a question" box on camera.
- Under Gaps, the first few suggestions are the good ones — no need to read them all.
- Pause for a beat after "only ten thousand" so the contrast lands.
